

CheyTac Intervention M-200 rifle

Papercraft by:DarkAntz

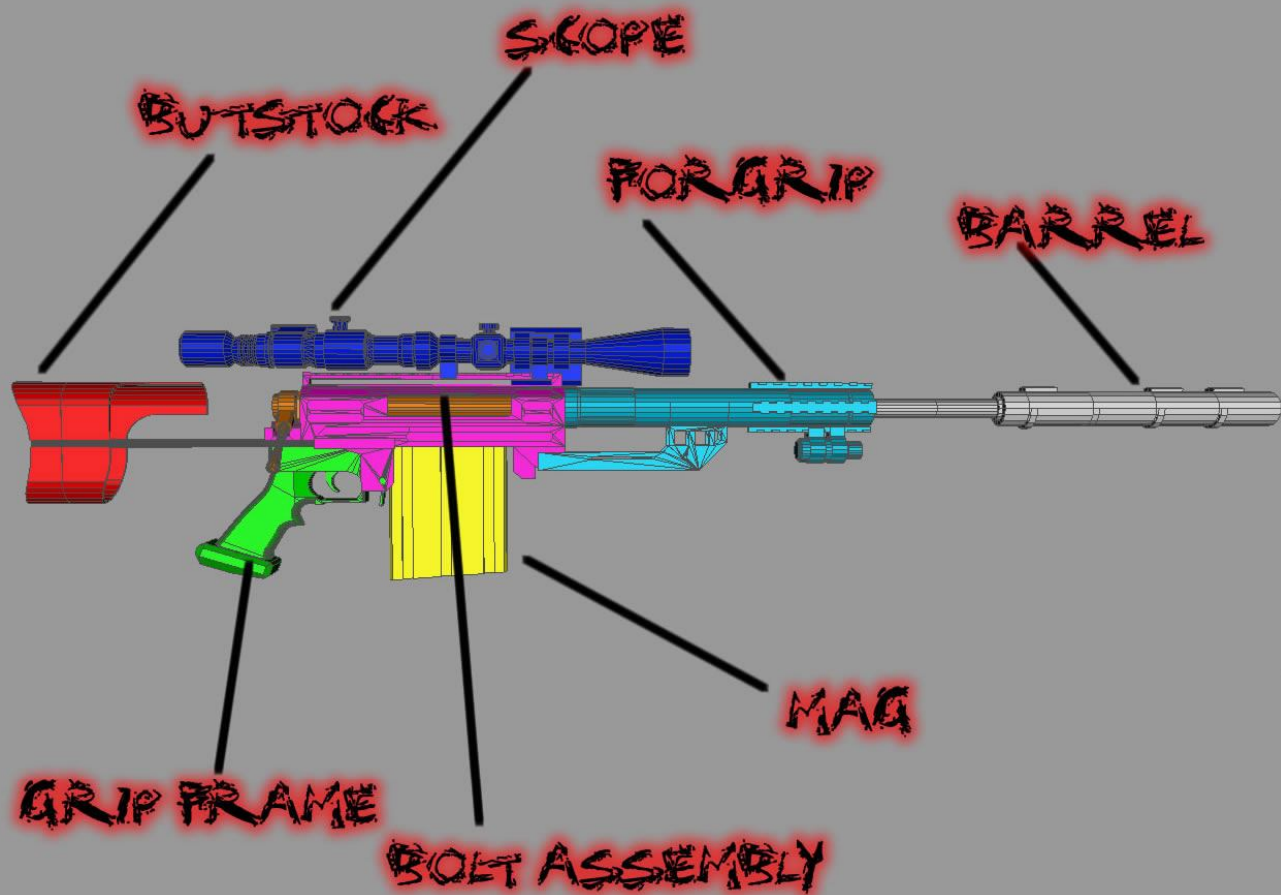

The CheyTac Intervention is an American bolt action sniper rifle manufactured by Randy Kobzeff for long range soft target interdiction. It is fed by a detachable single stack magazine, which holds 7 rounds. It fires .408 CheyTac or .375 CheyTac ammunition. CheyTac papers state that the entire system is capable of delivering sub-MOA accuracy at ranges of up to 2,500 yards (2,300 m), one of the longest ranges of all modern-day sniper rifles. It is based on the EDM Arms Windrunner.

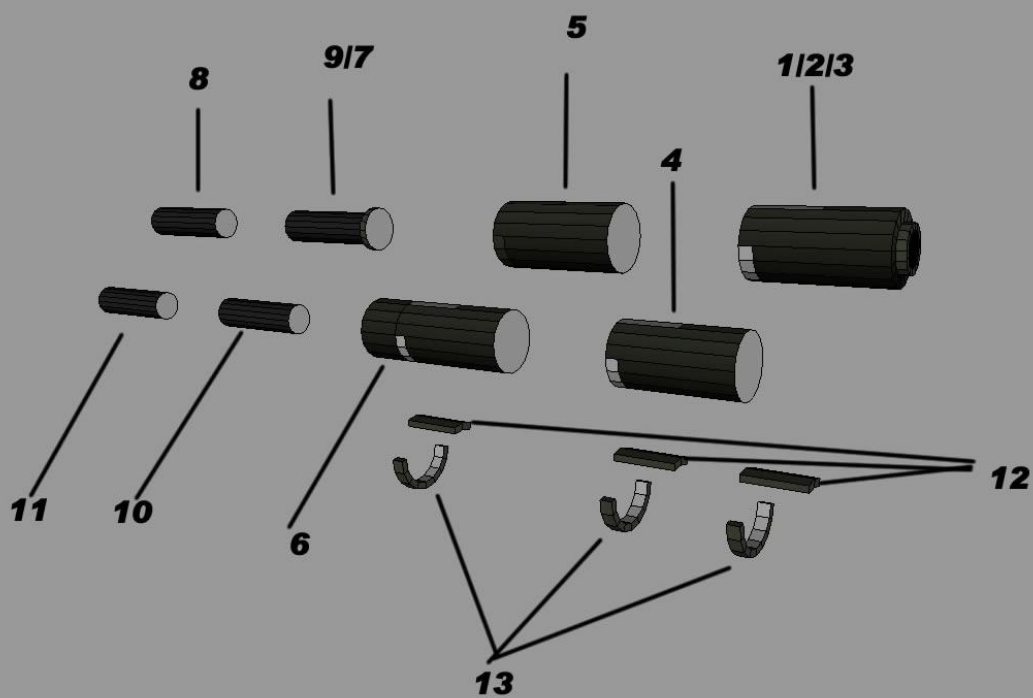

Basic diagram instructions included, please view the notepad file and the link to a instruction Youtube video to assist in building the strenthened tuves for the sholderstock. Any questions or help, email Blackheart781(at)gmail.com Enjoy!

****glue together one inside the other with printed sides facing outwards. recomend you also use additional layer of cardstock between layers to increase stiffness**

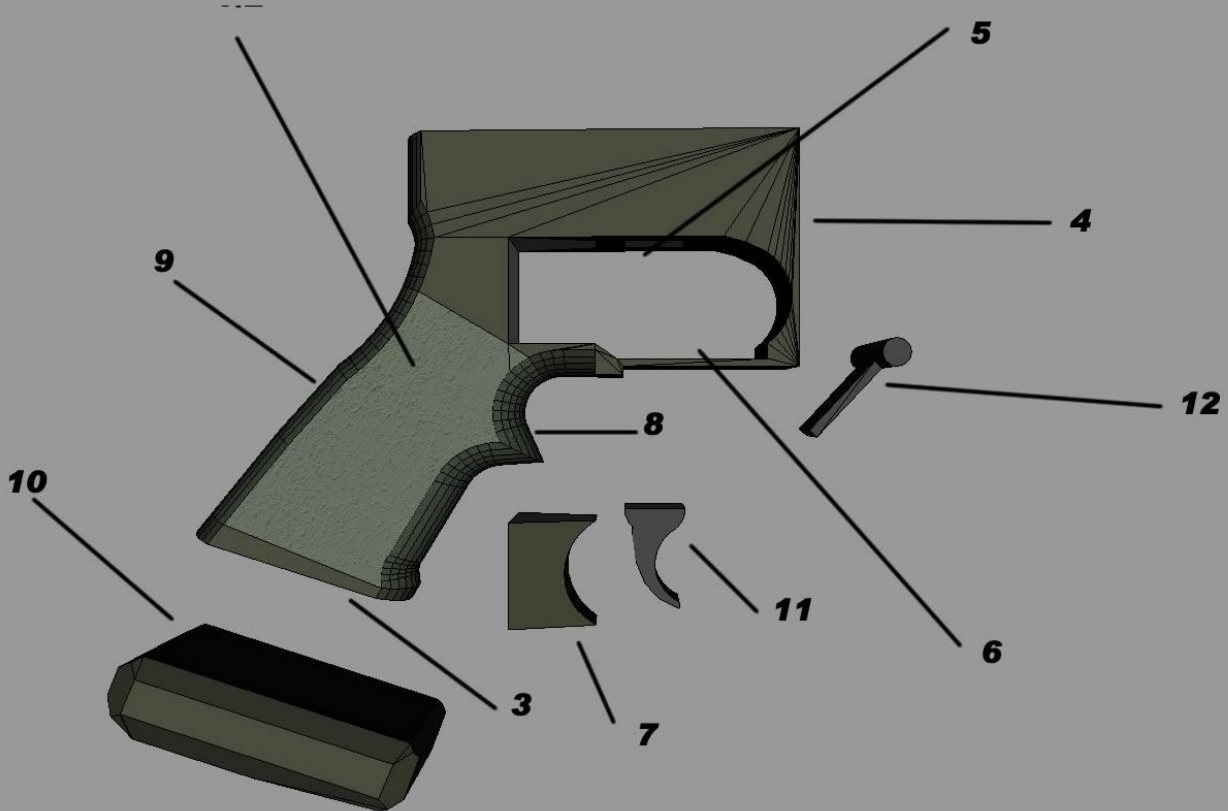

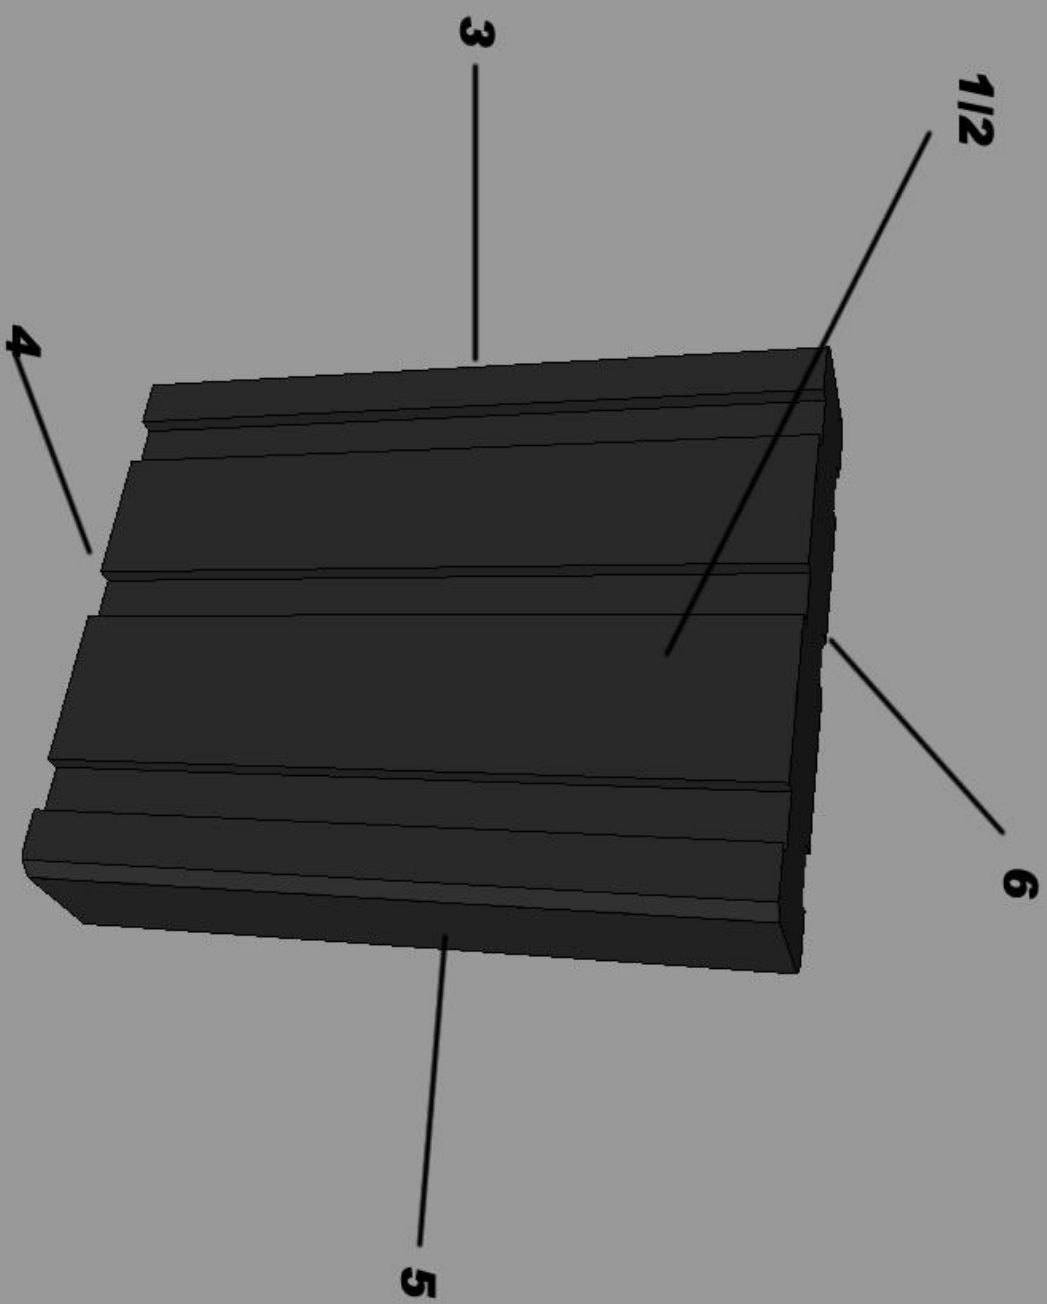

Be sure when adding the rails, they sit on the points indicated

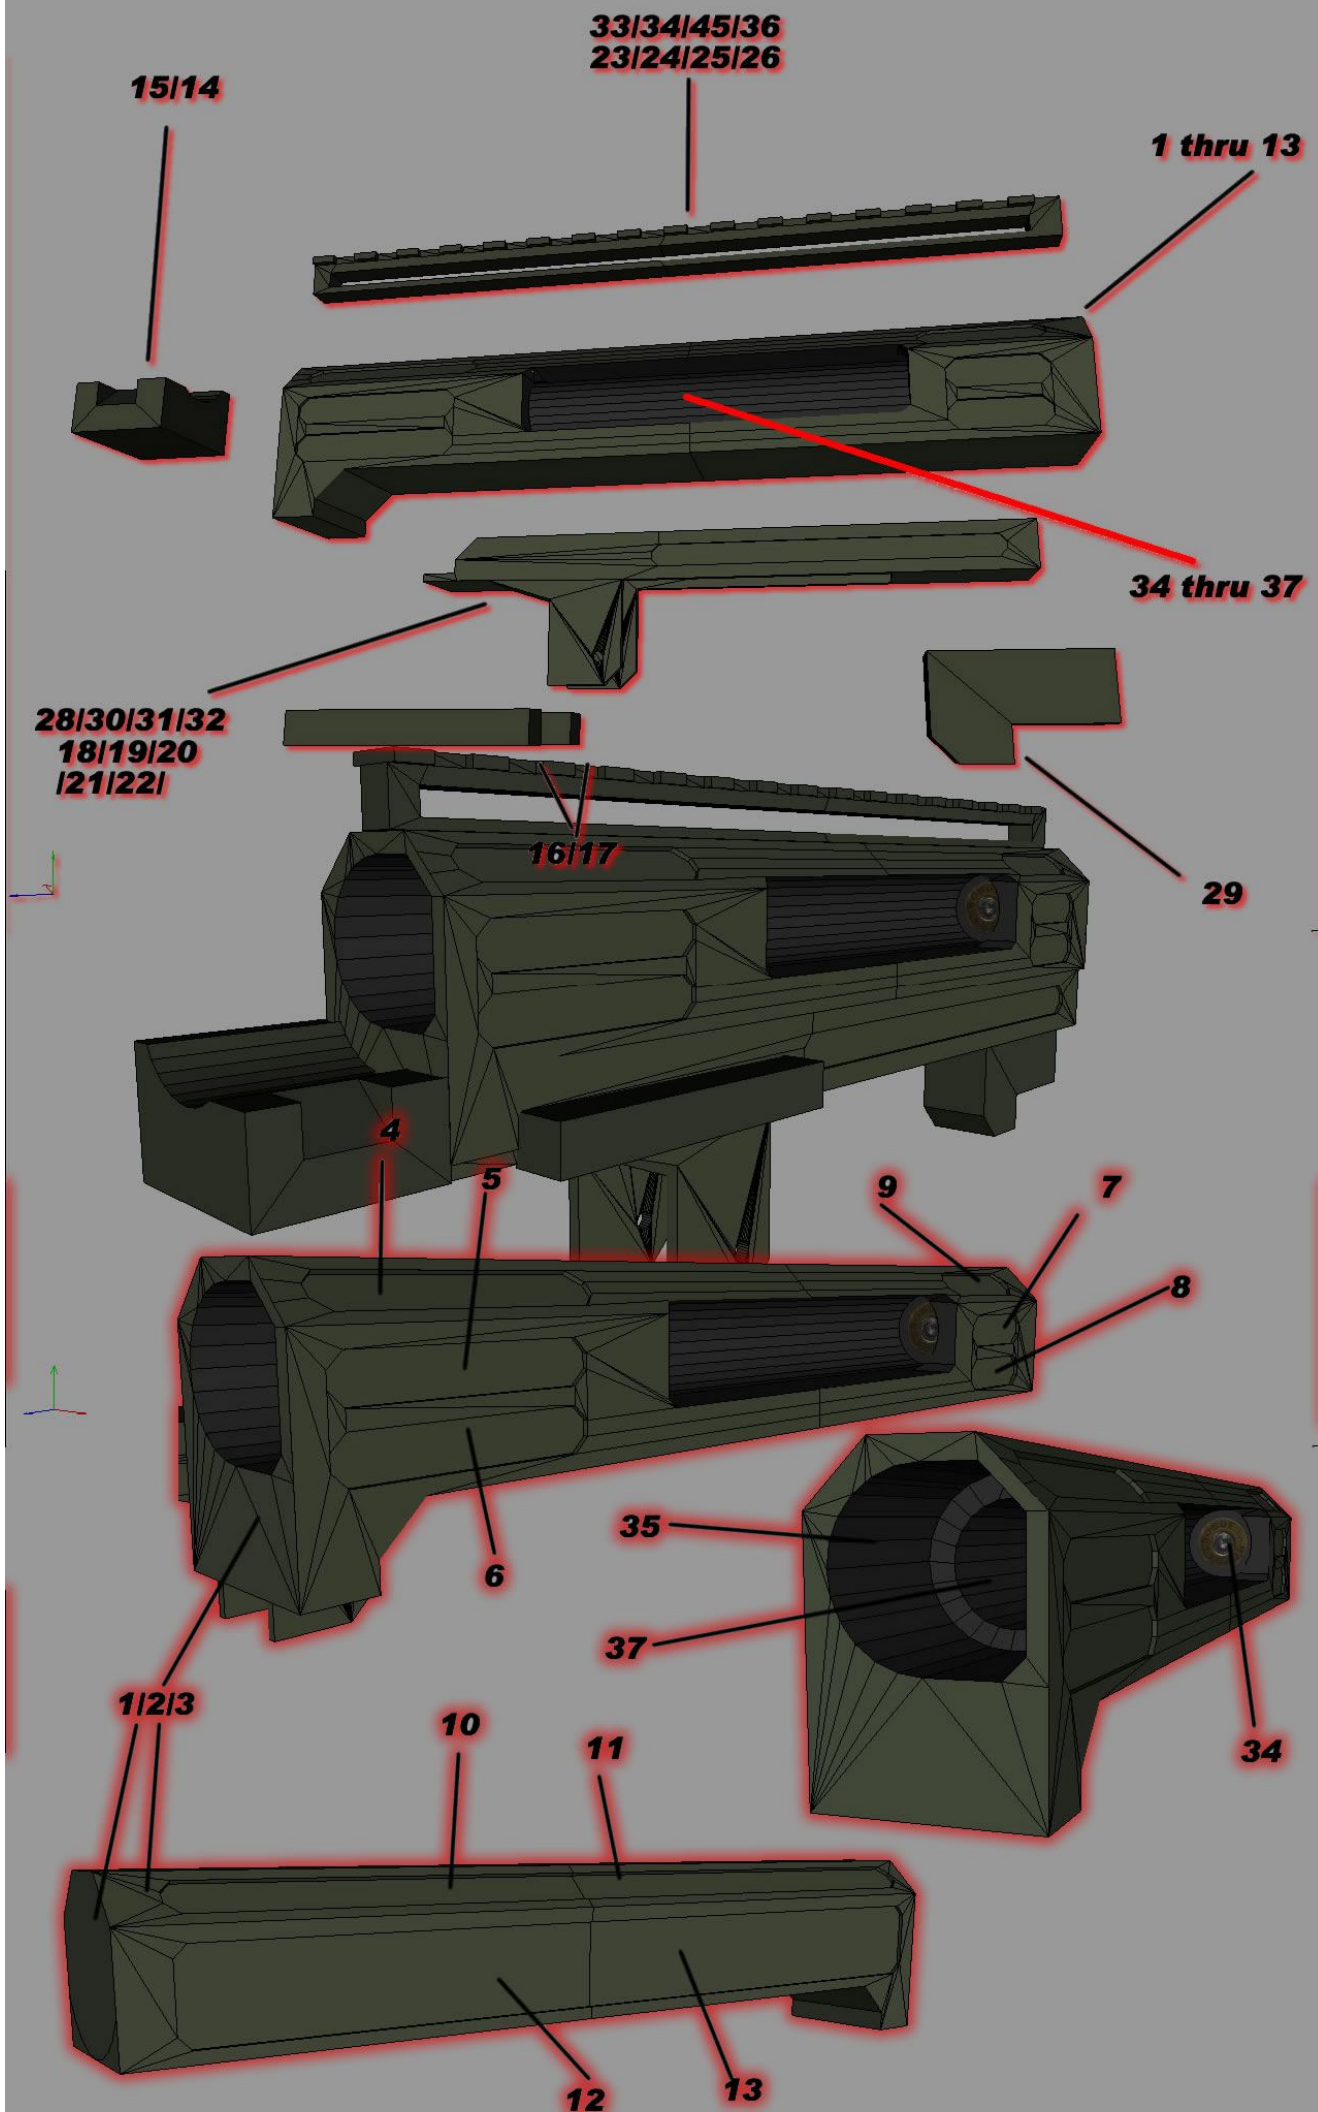

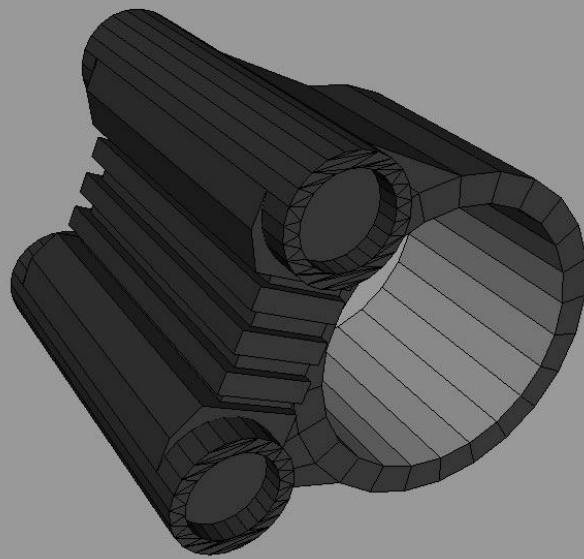

When placing item on tac rails, be sure to cut off the extruding parts the mounts will sit over*

48 thru 54
